WORK EXPERIENCE

AHBS Product lead
Jan 2021 – Current
- Translating business goals into specific software requirements
- Prioritizing software features based on market need analyses and company strategies
- Managing software project scope by making tradeoffs between competing software requirements, such as time vs. cost and software security vs. speed
- Prioritizing feature requests from software development teams
- Crystallizing the product vision and working closely with software engineers/the technical team to define its specifications
- Ensuring that the software solution is successfully meeting business goals and users' needs
- Tracking progress against plan and resolving any variances as soon as they are identified
- Making tradeoffs between features, schedule, and costs based on their relationship to business goals, company policies, software architecture constraints, and software development team capabilities

AHBS Scrum master / Technical team lead
Nov 2018 – Jan 2021
- Coaching the Development Team in self-organization and cross-functionality
- Helping the Development Team to create high-value products
- Removing impediments to the Development Team's progress
- Facilitating Scrum events as requested or needed
- Coaching the Development Team in organizational environments in which Scrum is not yet fully adopted and understood

AHBS Senior software engineer
Oct 2015 – Nov 2018
- Coaching and support med/junior Developers
- Monitor code quality and refactoring
- Modifying software to fix errors, adapt it to new hardware, improve its performance, or upgrade interfaces
- Directing system testing and validation procedures
- Directing software programming and documentation development
- Consulting with departments or customers on project status and proposals. Working with customers or departments on technical issues including software system design and maintenance
- Analyzing information to recommend and plan the installation of new systems or modifications of an existing system
- Consulting with engineering staff to evaluate software hardware interfaces and develop specifications and performance requirements.
- Designing and developing software systems using scientific analysis and mathematical models to predict and measure outcomes and design consequences
- Preparing reports on programming project specifications, activities, or status
- Conferring with project managers to obtain information on limitations or capabilities
