I have worked in software development for almost 4 years. During this period, I have had the opportunity to serve as a member of software development teams, through which I was able to participate in different software solutions for advanced business requirements and had the chance to work in different modules gathering different experiences which helped me develop good problem solving techniques and flexibility when handling different code / business cases. I have also been asked to handle a project with a small team which helped me develop good communication skills as well as attention to details. My goal now is to further enhance my skills in the role of senior software engineer.
